Research Overview:						
My research interests are in computer vision. I am now trying to program the computer to recognise the parts of a face in a photograph, so that the face measurements can be properly inserted in a database. This is both useful to a client, the Home Office, who want an indexed collection of 'mugshots', and an interesting theoretical problem. A number of systems can recognise whether a given object is present or not, but few can recognise the modifications of shape which can discriminate one mouth from another.
